EXPERIENCE

Front-end Developer

urbanclimbworks

📅 10/2025

- Developed a website from scratch, created the design based on the needs of client, after it being accepted made the website with proper SEO and indexed it within Google console.
- Uploaded the package under a paid custom domain on Vercel

Front-end Developer

x-technology

📅 09/2023 - Present

- Developing 2 Telegram mini apps that enable the user to create and customise his own mini app without code for his telegram bot. (using React, Next.js, TypeScript, Axios, Scss and more)
- Integration through developing API, working together with back-end
- We are a small team, so I take ownership on a high level for the front-end infrastructure. Thus I am quick on my feet and fast to adapt.
- Was the technical point of contact during presentation to clients (and Performing Business Analyst task)
- Had to work with a whole module written fully through ai, to refactor it to fit the design and integrate it with api and the whole project.

Front-end Developer

Stl-club

📅 05/2022 - 09/2023

- Developing my first Telegram mini app, allowing you to create your own store web-application with excel databases you can import/export, with no code.
- Led front-end development autonomously in a fast-paced environment with tight deadlines.
- Inherited a legacy code base that I had to audit and refactor
- Utilised and implemented an API which was still (unfortunately) in development through Axios. This elevated my understanding and problem solving both for front-end and back-end issues.

Junior Front-end developer

Beet barrel

📅 06/2021 - 09/2021

- Developed a web kanban app for project management with integrated api for assigning users to tasks.
- This was my first professional encounter with front-end development

EDUCATION

College Diploma with Honors in Information Systems and Programming

College of IT technologies

📅 2019 - 2023

College Diploma with Honors in Information Systems and Programming

SUMMARY

Frontend developer with over 3 years of experience building scalable web applications. Experienced in working in resource-scarce environments with strict delivery expectations. Self-taught and adept at quickly learning new skills and systems.
